

Natural language semantics and problem of layers

MOUŠEK, R. Natural language semantics and problem of layers. In *Proceedings of the 7th international Ph.D. workshop: Young generation viewpoint*. Praha: Ústav teorie informací a automatizace, Akademie věd České republiky, 2006. s. 115-120. ISBN: 80-903834-1-6

The paper deals with effort to divide natural language semantics into layers and process them separately in contrast to consider semantics as invisible unit. Some existing solutions are introduced and results of our research are described.
