Comparison of ART-2 and SOFM based neural network verifiers

MAUTNER, P., MATOUŠEK, V., MARŠÁLEK, T., ROHLÍK, O.

The Carpenter-Grosberg ART-2 and Kohonen Self-organizing Feature Map (SOFM) have been developed for
the clustering of input vectors and have been commonly used as unsupervised learned clasifiers. In this paper
we describe the use of these neuralnetwork models for signature verification. The architecture of the verifiers
and achieved results are discussed here and ideas for future research are also suggested.
